PRESIDENT'S CLUB
for Microsoft Dynamics

PrecisionForms delivers complete automation for design, distribution and storage of transactional documents, forms and data. Supported by tight integration with your critical business applications like Microsoft Dynamics AX and Microsoft SharePoint®, PrecisionForms is a powerful solution.

Benefits

-  **Reduce** implementation and migration times from weeks to days
-  **Enhance** Dynamics AX forms and reports
-  **Simplify** designing branded quality output
-  **Optimize** business communications tailored to customer needs, increasing customer engagement and profitability
-  **Extend** and support workflows beyond the boundaries of your ERP

Why PrecisionForms?

Reduce Implementation and Migration Time

PrecisionForms supports a faster, more cost-effective implementation of your forms and formatted documents within Dynamics AX. By simplifying the process, technical consulting costs are reduced, the project delivery is quicker and risks are minimized during the implementation phase.

Within days, you can have PrecisionForms live in your Dynamics AX environment, including the set-up of forms and documents without the need for technical consulting. Future migrations are made easier by reducing the need to recreate your forms during the AX upgrade process.

Enhance Microsoft Dynamics AX Forms & Reports

The PrecisionForms Designer enables the creation of dynamic invoices, cheques, purchase orders, bills of lading and other documents without complex Dynamics AX programming or application changes. With PrecisionForms Designer, users can add logos, graphics, barcodes, signatures, colors, fonts and conditional logic to Dynamics AX forms and documents. The intuitive graphical design interface empowers non-technical staff to design forms, giving control to those who understand the document and business needs best.

Create more functional, professional looking documents and distribute through virtually any device anywhere – print, fax, email, web or Microsoft SharePoint.

“The Bottomline forms solution belongs in every single Microsoft Dynamics AX implementation. When customers discover the time they can save creating AX custom documents and implementing multi-channel delivery, the solution simply sells itself.”

– Darrell Smith, Microsoft Certified, Business Management Solutions, Specialist, Agility Business Solutions

Simplify Designing High Quality Branded Output

PrecisionForms ease-of-use extends to the application interface as well. When producing documents, PrecisionForms shares the same familiar Dynamics AX user experience, maximizing efficiency with minimal training. When form customizations are needed, the convenient 'drag & drop' designer allows even non-technical staff to tailor and view reports. The intuitive interface makes designing and editing documents simple with the ability to view the final document during design.

Optimize Business Communications

When working within a global network of employees, customers and partners, PrecisionForms makes it easy for organizations to communicate and maintain document-centric business processes by supporting text localization for the most popular worldwide languages. By tailoring communications in the format and time your vendors need, you'll increase engagement and profitability. PrecisionForms gives you greater visibility of all outbound communications, offering a complete audit trail. And with PrecisionForms expanded integration with Microsoft SharePoint, even non-traditional ERP users can view the same documents available within Dynamics AX via their browser.

Extend and Support Workflows Beyond Your ERP

Process workflows are all built into the PrecisionForms design environment. With only one application to learn, users can build portable solutions and improve their business communications without costly changes to other applications.

Users can generate and automatically distribute multiple documents electronically or by print. With a high volume of transactional documents, you need a high level of visibility across document workflow. Process automation significantly improves cash flow, customer service and enhances productivity by reducing the cost and time spent on repetitive tasks.

About Bottomline Technologies

Bottomline Technologies (NASDAQ: EPAY) provides cloud-based payment, invoice and banking solutions to corporations, financial institutions and banks around the world. The company's solutions are used to streamline, automate and manage processes involving payments, invoicing, global cash management, supply chain finance and transactional documents. Organizations trust Bottomline to meet their needs for cost reduction, competitive differentiation and optimization of working capital. Headquartered in the United States, Bottomline also maintains offices in Europe and Asia-Pacific. For more information, visit www.bottomline.com.
